13.

- a. Search Task Manager → Open task manager tab → click performance.

- b.** Open Task Manager → Click Processes → Click task you want to End → Then End Task Button .

Discussion :

1. Control Panel

- The **Control Panel** is used to change Windows settings.
- You can view it in:
 - **Category**
 - **Small icons**
 - **Large icons**
- You can **search** for specific tools.

- Common tools: Programs, Internet Options, Hardware and Sound.

2. User Account Creation

- You can create new users on the computer.
- Set different **user privileges** (Admin or Standard).
- You can:
 - Change user name
 - Change user type
 - Change user password

3. Device Management

- Open **Device Manager** to see all connected hardware.
- Check if devices are working correctly.
- Identify hardware problems and fix them.

4. Driver Installation

- Drivers connect hardware to your computer system.
- **Plug and Play** drivers install automatically.
- Other drivers may need to be **installed manually**.

5. Disk Cleanup

- This tool helps delete:
 - Temporary files
 - Unused files
- It frees up space and makes your computer faster.

6. Disk Management

- Used to manage your hard drive:
 - **Partition** the disk (divide into parts)
 - **Format** partitions
 - **Change** drive letters
 - **Extend or shrink** a volume (resize)

7. Disk Defragment

- Reorganizes scattered files to make your computer faster.

- It is helpful for **hard disk drives (HDD)**.

8. Firewall

- A **firewall** protects your computer from online threats.
- You can **enable or disable** the Windows firewall.

9. Antivirus

- **Windows Defender** is the built-in antivirus in Windows.
- It protects your computer from viruses and malware.

10. Windows Explorer and Features

- **Windows Explorer** is used to browse files and folders.
- You can also enable or disable certain **Windows Features** (like .NET Framework, etc.).

11. Backup and Restore

- **Backup** is used to save a copy of your data.
- **Reset** helps return the system to factory settings.
- Useful if the system is slow or has problems.

12. Restore Point

- A **restore point** saves the system settings.
- You can **restore** your system to an earlier time if there is a problem.

13. Task Manager

- Helps you watch how your computer is working:
 - **CPU** usage
 - **Memory**
 - **Disk**
 - **Network**
 - **GPU**
- You can **end tasks** that are not responding.
